5-PC. CUTLERY SET IN BLOCK

### **Cutlery Features**

- Beautiful Bamboo handles contoured for comfortable use and eye-catching appeal.
- Precision crafted forged blades made from fine quality 420 high carbon stainless steel sharpened to a razor's edge.
- Full tang handle construction and three stainless rivets, the only choice for fine cutlery, assures years of trouble free food preparation.
- Bamboo Block is uniquely designed to safely and attractively store cutlery pieces. Compact size saves counter space. Soft rubber feet protect counter surface and prevent sliding.
- Due to the inherent nature of this fine grained Bamboo, hand washing with a mild detergent and towel drying is recommended.

Set includes:

7.5" Chef Knife

7.5" Carving Knife

7.5" Bread Knife

5" Utility Knife

3.25" Paring Knife

Bamboo Block, 8.75"H X 6.33"W X 3"D

Renewable

**BAMBOO...**

*As Luxurious as Fine Wood.  
Stronger Than Steel.*

BAMBOO IS THE LONGEST "grass" in the world. There are many varieties of Bamboo, with some plants as short as 12 inches in height while giant timber Bamboo can grow as tall as 100 feet. Certain varieties of Bamboo can grow up to 2 inches per hour or 4 feet per day.

Amazingly, Bamboo has a tensile strength superior to certain grades of steel and a weight-to-strength ratio greater than graphite...and, yet, it's a common food source in many countries for people and pandas, alike.

Due to its incredible strength, Bamboo will bend in strong winds, but rarely break. In Asian countries Bamboo is even used as scaffolding surrounding the highest skyscrapers.

Since Bamboo is a quickly growing grass and can grow in dense conditions, it is considered one of the best renewable resources on earth. These rapid growth characteristics allow it to generate more oxygen than an equivalent number of trees which contributes to the purification of our air and soil. And because it is beautiful, yet, harder than wood, Bamboo is widely used in the manufacture of household products including kitchenware, tableware and home accessories.

The nodes, or joints, between segments of the Bamboo stem enhance the grain characteristics in Bamboo wood providing a soft watercolor appearance which contributes to its beauty and remarkable popularity as household products and decorative accessories.
